

Smart. Sustainable. Abundant. 365 Days a Year

BACK-YARD GREENHOUSE KITS

GROW NATURALLY, YEAR-ROUND

Ceres greenhouses are the only backyard greenhouses designed to grow year-round with little to no fossil-fuel heating or cooling. By using passive solar design, and storing heat in the soil underground with a GAHT™ system, Ceres greenhouses are made to grow much more, year-round, without relying on fossil-fuels.

CREATE YOUR OWN BACKYARD PARADISE

Grow your own bananas, avocados, lemons and fresh fruits and vegetables. With stable, warmer year-round temperatures, a sustainable greenhouse opens up the possibilities for what you can grow when.

EASY TO BUILD. BUILT TO LAST

Ceres greenhouses are the only kit greenhouses designed for very high wind and snow loads. Each kit has been engineered by a licensed structural engineer. Durable steel framing and water proof materials ensure that your investment is made to last. Pre-fabricated steel framing allows kits to be shipped to site and constructed by you or a contractor. (We recommend some building experience).
